Contract Title: Salmonberry Generator

Description:

The Salmonberry water pump station has an antiquated emergency generator that will be replaced this year. Its fuel use is 100 gallons of diesel per 3 hours and its age makes it unreliable. The District contacted several vendors and has purchased a new 100 kilowatt generator to replace it. The improvements also include an automatic transfer switch that eliminates the requirement to have an employee come to the site to manually turn it on and switch it to run the equipment.

Contractor:

Ahearn Electric from Bremerton

Contract Cost:

\$ 50,581 plus State sales tax.
